SKILLS

- Angular
- TypeScript
- RxJS
- HTML5 / CSS3
- Tailwind CSS
- .NET
- REST API / Web API
- MySQL
- GitHub / GitLab
- Skill.md Workflow Design
- Microsoft Azure
- PostHog / Analytics

LANGUAGES

- English (Advanced - C1)
- Thai (Fluent)

MY WEBSITE

PROFILE

Fullstack developer focused on building structured, maintainable web applications across frontend and backend. Experienced working on enterprise-scale systems where clean module design and clear data flow prevent issues early rather than fixing them reactively. I use AI tools to accelerate routine work — coding, testing, documentation — so I can spend more effort on architecture and solving the hard problems at the root.

WORK EXPERIENCE

Gofive

Mar 2026 - Present

Fullstack Developer · 10 Person Team

- Developed and maintained features for a CRM platform serving 100+ enterprise clients across multiple industries, using Angular on the frontend and .NET Web API on the backend.
- Reduced Deepsource-flagged issues from 27,000 to under 1,000 (96%) using AI coding assistants with custom Skill.md definitions.
- Built AI-assisted scripts and automation with custom prompts and skill definitions, turning one-off manual tasks into repeatable workflows.
- Integrated AI tools (Claude) into the development workflow via MCP to connect directly with internal tools, speeding up debugging and automation.
- Implemented event tracking with PostHog to capture user interactions across the CRM, identifying which entry points drove upsell actions to inform product decisions.

INET

Dec 2024 - Feb 2026

Software Engineer · 8 Person Team

- Designed and developed frontend features for 3 internal management systems used daily by 100+ staff across operations teams.
- Structured feature-based modules with clear separation between components, services, and application state, making features easier to extend and maintain.
- Collaborated closely with backend engineers, BA, UI/UX, and QA to clarify requirements and propose feasible technical solutions.
- Refactored existing components for readability and reuse, lowering duplicated code and shrinking affected modules by ~25% as the system scaled.
- Focused on clarifying module boundaries and data flow early, reducing post-release bugs in new features by ~35%.

EDUCATION

Bachelor of Industrial Technology

2022 - 2024

King Mongkut's University of Technology North Bangkok
